Code

FIN4214

Title

Introduction to Financial Statement Analysis

Prerequisites

FIN 3201 Financial Institutions and Markets FIN 3121 Principles of Finance

Credits

3

Description

The course objective is to teach students to accurately read and analyse financial statements of various companies in a variety of industries. It examines the uses and misuses of financial statement data for a wide range of financing decisions. The course analyses various reporting options that affect income, assets, cash flow forecasts, financial ratios, and trends; distinguishes between accounting rules and underlying economic realities; and examines approaches that analysts can take when external reports do not reflect a firm's underlying economics. The course focuses on the pragmatic implications of corporate disclosures and nondisclosures.

Outcomes

By the end of the course, students should be able to: Understand the roles of financial reporting and financial statement analysis. Understand the roles of the key financial statements in evaluating a company's performance and financial position. Explain the objective of financial statements and the importance of reporting standards. Identify and explain information sources besides annual financial statements and supplementary information that analysts use in financial statement analysis. Identify the analytical phases, sources of information, and output of financial analysis.
